Biometrics Automated Toolset (BAT)

Fingerprint Reader
HIIDE
10 Print Reader
Iris Reader
CF-74 Toughbook
Digital Camera
1TB Hard Drive
Server
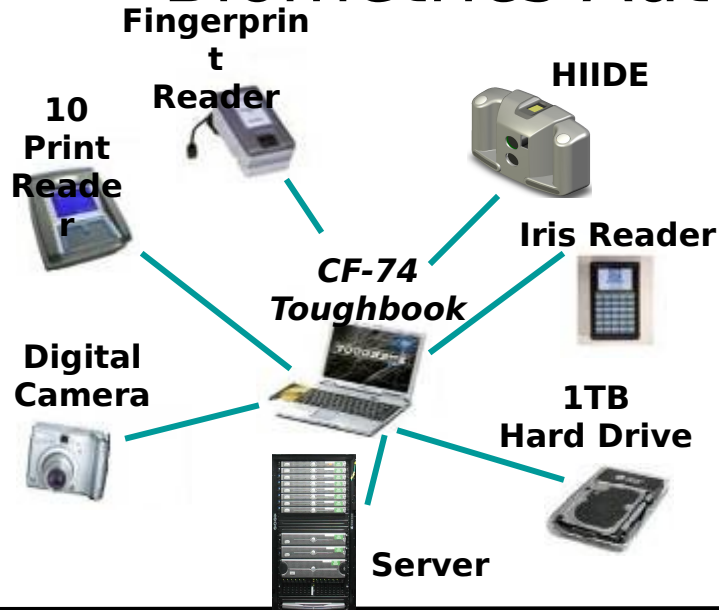

Description

- (U) Mature biometric collection, storage and cross referencing capability to satisfy all Biometric stakeholders' requirements in allied, threat and neutral domains.
- (U) BAT is a multimodal biometric system that collects and compares fingerprints, iris images and facial photos.
- (U) Used to enroll, identify and track persons of interest; build digital dossiers on the individuals that include interrogation reports, biographic information, and relationships.

Characteristics supporting Objective Force

- (U) Rapid execution of hold, detain, release decisions regarding suspects.

- (U) Matches individuals known or suspected of terrorism, criminal activity or other persons of national security interest that can be accessed through accredited databases.

- (U) Positive identification of local nationals and locally employed persons requesting base access.

Benefits/Capabilities

- (U) Provides red light/green light on identification

- (U) Improved Situation Awareness (SA) through association of biometric information with other intelligence data

- (U) Shares biometric information with DoD Community

- (U) Enables identification of recidivist combatants and terrorists at border checkpoints

- (U) Tags biometric files with geospatial information
